

Tigerflex

FLOATING SUCTION LINE

Tigerflex floating suction line sucks clean, water-free oil from surface

In most standard oil tank designs, oil is drawn from the bottom of the oil tank where dirt, sludge and water collects as time goes by. This dirt, sludge and water is transported through the suction line to filters and the burner nozzle, which leads to problems in the heating system. Tigerflex is the solution.

The Tigerflex floating suction line is a simple and ingenious accessory that will eliminate unnecessary breakdowns in the heating system. The Tigerflex consists of a float and rubber hose that are made of high quality oil-resistant material and a pipe piece that is fitted to a connecting nipple to be mounted on top of the oil tank. The float follows the surface oil level sucking and transporting only clean, water-free oil to the burner.

Tigerflex advantages

- Easy to install and ideal for mobile home applications
- Takes only clean, water-free oil from the surface
- Reduces the risk of clogged nozzles and filters
- Reduces problems with paraffin sediments in cold oil
- Available with 1 1/2" and 2" connecting nipples
- Standard length: 69" (1,75 m), other lengths upon request
